

Brass Fittings

Brass Fittings is one of the most mostly used materials for making pipe fittings. The copper and zinc alloy has been used for centuries because of its unique properties that make it a good choice for a variety of uses. Of the pipe attachments available, most

varieties include elbows (male or female), couplings, crosses, union tees. More complex fittings, such as pipe manifolds with multiple starts, custom units & 5-way joints, are also available through manufacturers. In some cases, npt brass fittings and brass sanitary fittings are chrome plated for enhanced performance in certain systems. brass compression fittings are also used in automotive applications, where they are used Like fuel line valves, air brakes, and hose ends. Other uses include cooler, ballcock adapters and refrigerator fittings and compression fittings. Brass has a Molecular Weight of 321.42 gm. Its Chemical Formula is Cu_3Zn_2 . There are many other reasons why Brass fittings are in such big demand today. Pipes made from brass fittings are much easier to Mold, shape or bend, than fittings made from most other kinds of metals. We brass fittings manufacturers in India. industrial brass fittings comprise a wide range of pipe attachments, flare fittings and threaded fasteners. Due to its exceptional quality's hardness, flexibility, durability and rust-resistance threaded brass fittings is widely used in plumbing brass fittings applications, and most pipe fittings are available in brass.
